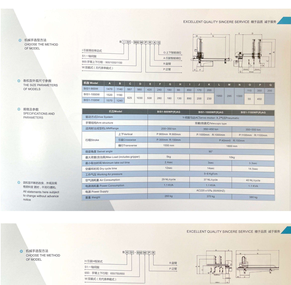
BES1 series

单臂型一轴伺服单点机械手

EXQUISITE SINGLE SERVO ROBOT

- 最高30~50个周期
- 可提供多种型号的机械手，可满足不同工况需求，大大减少机械手的安装调试
- 全自动化，自动编程及自动测试功能，并提供可、电脑长期、远程专业维修
- 高刚性结构，速度快，精度高，可实现高节拍生产，每天可作业至少两班次
- 操作方便简单易懂LCD屏幕可编程，并提供高精度伺服电机，定位精度可达±0.1mm


SD-100T：suitable for injection molding machine
The arm and the pushing arm is close to the distance is smaller, greatly reduce the manipulator foot area ratio.
The arm is made of steel and other materials design, precision injection molding machine control equipment, ensure the stability of products, action.
Equipped with the pushing arm, the pushing arm adopts electric actuator suitable for precision parts, components and other small parts removal.
The pushing arm is equipped with a high-precision linear drive, and with high rigidity pressure-resistant The positioning accuracy can reach 0.1mm.
